

# New Energy Solutions – Battery Testing

June, 11th 2024 | 10 – 11 Uhr | Online via MS Teams

© iStock - kynny

## At a glance

- Maximum safety and reliability of batteries
- Extended lifespan and reduced operational costs
- Non-destructive defect localization in battery cells
- Optimized performance and energy efficiency

## Digital Session

### When?

June, 11th 2024  
10:00 – 11:00 AM

### Where?

Online via MS Teams

## Ensuring Battery safety and longevity: A comprehensive tour of Fraunhofer ISE's battery testing lab

Batteries are the backbone of the energy transition. Their reliable performance and long lifespan are crucial for the success of these future technologies. The Fraunhofer ISE Lab Battery Testing is a one-stop shop for comprehensive battery testing, ensuring the performance, safety, and longevity of your energy storage systems.

The Lab offers a wide range of testing services for all types and sizes of batteries – from individual cells to complete battery systems.

Analysis of batteries' performance under real-world operating conditions, identifying potential problems, and optimizing the lifespan of your energy storage. Focus on Performance, Lifespan, and Safety: The core of the battery testing revolves around three key aspects: performance, lifespan, and safety.

Join our upcoming webinar to delve into the world of battery testing and discover the comprehensive capabilities of state-of-the-art battery testing.
